

Our Vision

We're establishing a global eSport ecosystem, standing at the pinnacle of virtual sim racing. Our core focus is on engaging drivers, sponsors, and fans by crafting an immersive, unique, and interactive eRacing experience. Through a blend of professional racing and strong brand partnerships, we're driving a new era of entertainment. For our drivers, we are creating alternative career paths to enter the world of motor sports by providing them the opportunity to make a living both on the digital and physical racetrack. As we build our global network of franchise racing lounges and produce world-class simulators, our focus remains on delivering thrilling racing competitions and harnessing customer data for an unparalleled vertically integrated experience. Our journey is fueled by the rising global popularity of eSports and racing, and we're uniquely positioned to ride this wave, unlocking untapped opportunities in the fastest-growing sport worldwide.

Network Engineer 100%

Our opportunity

This is a perfect opportunity for individual contributors which are proactive in their work approach and wish to provide solutions without being blocked by political decisions. As the Network Engineer, you will be responsible for analyzing our currently deployed network solutions at our racing lounges, maintaining them, and proposing improvements to the concept. You will become part of IT department which is focused on creating standardized solutions for franchise racing lounges, as well as several other projects which have a direct impact on eSports and the Sim Racing audience. Your daily work would involve research and proposal of new network concepts, that accommodate daily lounge operations, as well as high usage events which include broadcasting and streaming. Further considerations would have to be made on the strategic level regarding deployment costs, fleet maintainability across multiple lounges and personnel training to operate the said equipment. Lastly occasional first line support regarding networking would be required, with up to 20% work-related travel to the lounge location. If the above responsibilities excite you and you view them as opportunities to deploy solutions that will be experienced by thousands of Sim Racers across our lounges – do not hesitate to apply.

Your Responsibilities

- Designing a scalable and standardized network solution for racing lounges
- Designing and implementing firewalls and other security methods to secure company infrastructure
- Maintaining, configuring and troubleshooting network hardware and equipment, including tools and systems within company networks
- Collaborating with IT Software team and Executive management on various cloud and local network projects
- Ensuring compliance with regulatory and quality standards
- Educating racing lounge staff on the basic usage of network systems
- Providing first level support at our head office and racing lounges
- Documenting network updates, configuration changes and technical support and modifications

Your Qualifications

- 4 Years of Experience in the role as Network engineer
- Bachelor's degree in network engineering or computer science or other related degree or Networking certificates
- Networking knowledge of protocols, devices, commands, topologies, techniques and best practices.
- Experience in creating new networking solutions.
- "Can do" Attitude, Excellent Communication and Good Problem solving skills.
- Good level of English, knowledge of German is a plus.
- Experience with Azure Cloud Infrastructure is a plus.
